# Seminar Wissenschaftliches Arbeiten

Computational Aspects of Machine Learning

Maximilian Thiessen
Prof. Thomas Gärtner

September 20, 2020

Prof. Thomas Gärtner

Maximilian Thiessen

Datalogy, Data Science, …

Peter Naur (1974):
*The **science of** **dealing with data**, once they have been established, while the relation of the data to what they represent is delegated to other fields and sciences.*

(Vasily Zubarev, 2018)

(Drew Conway, 2010)

John W. Tukey (?):
The best thing about being a statistician is that you get to play in everyone's backyard

Don't forget that statisticians are the free-est of all scientists — they can work on anything. Take advantage.

John Quackenbush (2014):
Every revolution in science—from** Copernican heliocentric model to the rise of statistical and quantum mechanics, from Darwin's theory of evolution and natural selection to the theory of the gene—**has been driven by one and only one thing:** **access to data

In this seminar, you will...

- experience how a typical machine learning conference is organised
- familiarise yourself with a specific area in machine learning
- learn about learning algorithms and their properties
- understand a few research papers
- summarise and present research results

We will use easychair for submissions and reviews

Format

Author	Reviewer	Chairs (we)
Spotlight talks (2)		
Abstract submissions (2)		
	Bidding	Assign projects
Progress presentation		
Report draft		
	Reviews	
Final presentation		
Final report		

You will take on the role of author and reviewer for a machine learning conference:

- submit two short talks and abstracts
- bid for projects of your fellow students
- we will assign you one of your own projects to work on and the projects to review later
- give a progress presentation and submit a report draft
- review the draft reports assigned to you
- give a final talk and submit a final report

Topics

We will focus on computational aspects of machine learning

Algorithmic properties are central, e.g., computational and sample complexity
We encourage your own creative ideas

(but you will need to have them worked out well)

Check our teaching homepage for further details

Example topics include

- active learning
- online learning
- kernel methods
- learning with graphs
- unsupervised learning
- semi-supervised learning
- interpretable machine learning

$$\left\{ x \in \mathbb{R}^2 \mid \langle x, w \rangle = 0 \right\}$$

Attend the *mandatory* first (online) meeting

- date and details will be announced on our teaching homepage
- propose your own project idea or choose one of ours
  - make sure your idea is well thought through and developed according to our guidelines
  - we will give preference to students who can present and discuss the project to some detail in the first meeting

Examination Modalities

Your final grade results from your...

- short spotlight presentations
- first abstracts
- progress presentation
- draft report
- reviews for your fellow students
- final presentation
- final report
